RULER CABLE

WATER LEVEL METERS

water level meters provides an accurate measurement method of level meter, usually used for the measurement of water level in the

drilling holes or water level pipes, particularly suitable for hydropower engineering underground water level or artificially in groundwater level monitoring.

This instrument can be used in the construction period, but also can be used as the long-term safety monitoring project. Comply with the dam safety monitoring technology standard.

Working principle

The water level meter is composed by the Probe(1) & cable(2) + Waterproof(3) and Air vented(4) & Air vented cable(5) + Waterproof(6) and Air vented(7) & Air vented cable(8) + Waterproof(9) and Air vented(10) & Air vented cable(11) + Waterproof(12) and Air vented(13) & Air vented
